Home → FAQs → Common Problems with Online Library (search engine) → Why does Internet Explorer close when I try to print?

1.1. Why does Internet Explorer close when I try to print?

This is caused by a compatibility issue with Internet Explorer v. 8.

Check the version by clicking on the help "?" and "About Internet Explorer".

A new box will open that displays the version you are on.

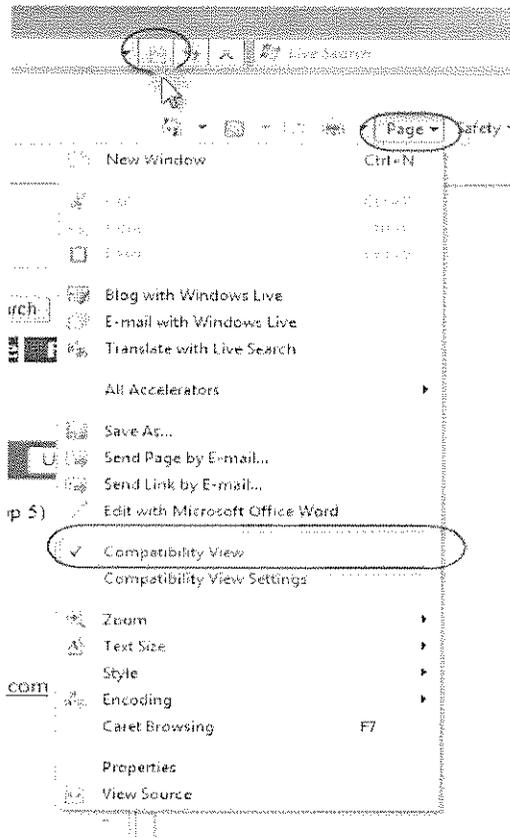

Close that box and navigate your browser to the portion of the code you want to print.

Before you print, click on the compatibility view icon on the address bar.
